Period: _____

Factoring Review 1 – Greatest Common Factor (GCF) & Differences of Squares

Simplify each expression by factoring out the greatest common factor (GCF).

1) $7x + 49$

2) $3x^2 + 15x$

3) $x^3 + 9x$

4) $12x^5 + 6x^2 + 18x$

5) $4x^3 + 12x + 28$

6) $2x^3y^2 + 10xy$

7) $11xy^2 + 121x^5y$

Simplify each difference of squares. REMEMBER- check to see if you can factor out a GCF as your first step!

8) $y^2 - 16$

9) $x^2 - 144$

10) $3x^2 - 12$

11) $25x^2 - 100$

12) $9y^2 - 49$

13) $81x^2 - 36x^4$

14) $8x^2 - 50$
