

NOTES 4.6 – Graphing Quadratics from Vertex Form

WE WILL BE DETERMINING:

- Vertex (h, k)
- Points (of the quadratic) – T-Chart
- x-ints ($y = 0$) These can be called Roots, Zeros, Solutions, or X-Intercepts
- y-ints ($x = 0$)
- Domain & Range
- Max/Min
- Increasing/Decreasing Intervals(read graph from left to right)
- Axis of symmetry ($x=h$)

1) $f(x) = (x - 3)^2 - 4$

Vertex: _____

AOS: _____

x-ints: _____

y-ints: _____

Domain: _____

Range: _____

Max / Min _____

Increasing/Decreasing Interval _____

2) $y = -(x - 3)^2 - 2$

Vertex: _____

AOS: _____

x-ints: _____

y-ints: _____

Max / Min _____

Domain: _____

Range: _____

Increasing/Decreasing Interval _____

3) $y = 2(x - 1)^2 - 4$

Vertex: _____

AOS: _____

x-ints: _____

y-ints: _____

Max / Min _____

Domain: _____

Range: _____

Increasing/Decreasing Interval _____
